

I do not use the XM radio traffic and weather but enjoy the rest of the radio thoroughly. I feel XM satellite radio has done a wonderful job and deserves respect and should have their freedom to broadcast weather and traffic if they feel to. The consumers should be heard and if they want this feature XM radio should have the right to broadcast this. XM radio is the wave of the future and will not flourish with such limitations. As a XM radio member I feel they have done a wonderful job and should not be regulated by other ancient forms of broadcast.
